

The deadly cyborg

It's the year 3021 and the planet's only hope of being saved lies in the hands of a very strong human-mutant, who is robotic with his face being the only human part of him. When he shapeshifts, you'll see him in his other forms of a titan: animals, aliens, and also a fast car. Despite his enemies attempts to destroy it, he can still access his favorite weapon, the plasma cannon. He is made from completely strong hydrochloric titanium. The hydrochloric acid can melt human skin and there is no-one who can take him apart except his own maker.

Cycloptic illusions might not look it but he is really tough, but every person or superhero has a weak spot. This cyborg's weak spot is facing hydrochloric acid, which is too strong for his hydrochloric titanium. One touch of this deadly acid and he will only have one hour to get into any alkaline mixture. He also makes sure that he does not have any titanium sticking out because if a villain gets in the hands of hydrochloric titanium, he will be done for!!!! He has no family so that the evil, vicious villains can't threaten him in this way either.

Mr. Cyborg can shapeshift into anything he wants, can use his plasma blaster to go through anything and even has a vehicle called the jumbo Lambo. He also has an anime sword, which has an ability called 'Strike One, Slice One'. Despite this, he is a very calm and kind. This cyborg mutant has the most advanced technology that's ever existed and spidy senses that outdo even the most cunning of opponents!
